

FEARLESS

Check In Presentation
Mina Moon

PROBLEM

15 million people in America and Canada suffer from social anxiety. People with social anxiety fear- meeting new people, being the center of attention, being watched, making small talk, public speaking, being criticized, going on a date, eating or drinking in public and more.

This could lead or be linked to depression and/or panic attacks, which causes a serious issue.

GAME CONCEPT SUMMARY

“Fearless” is a game that **metaphorically depicts** social anxiety disorder. As a character in an unknown, quiet city, he/she will play as Fearless and meet unique characters that represent different symptoms of the disorder, including **emotional physical and behavioural symptoms**. The user will communicate with each character and do small tasks that will help these characters out. This brings awareness to social anxiety as well as suggest methods of self therapy, commonly derived from **cognitive behavioural therapy sessions**. Cognitive behavioural therapy is proved to be the most effective treatment for social anxiety.

This will be accompanied with calming music, sound effects and graphics. This could link to art therapy.

SO IN OTHER WORDS,

BE YOUR OWN THERAPIST.

PROMOTING “FEARLESS”
